

Futura Goes Green!

**Yes, we have UN plugged the FAX,
And we are saving trees.**

According to a website research effort, it is estimated that one tree of normal logging size would yield roughly 90,000 sheets of paper. In our normal, every day use of the FAX machine prior to our conversion to electronic media, we averaged about 2 cases of paper for the machine a month. At a normal quantity of 5,000 pieces of paper per case, we can save 1.2 trees this year alone!

In an effort to help our environment, and improve our customer service, we are now receiving your Fax's via electronic transmission. This means that your FAX is almost immediately available to the Technician, and we are able to respond faster and in almost real time to your needs. No more waiting for prints, and time consuming delays. Your Tech can pull your FAX as soon as it arrives and is processed through the queue.

Our goal in Health Care extends to the environment, and we just wanted to let you know that your software company cares.
